

TRX OFFERS IMPROVED ACCESS TO INDUSTRY-LEADING TRAVEL REPORTING PLATFORM

Corporate Travel Departments and Financial Managers Gain Improved Insight and Ability to Monitor and Reduce T&E Spending

ATLANTA — May 21, 2009 — TRX, Inc. (NASDAQ: TRXI), a global leader in travel technology and data services, today announced the release of the latest version of TRAVELTRAX. TRAVELTRAX is a suite of travel data management and business intelligence solutions delivered as hosted software with support services which transforms transaction data into actionable insights and enables corporations and travel management companies to effectively monitor and control T&E costs.

The latest version of TRAVELTRAX, version 5.5, introduces an updated user interface (UI) that incorporates three key web design principles—simplification, improved accessibility, and user-driven customization—to allow users to access reports, build custom dashboards, and configure system and user settings more effectively.

The new UI improves navigation workflow, which helps users locate, load, and run travel expense reports more efficiently. In addition, the new UI features updated icons and visualizations to facilitate and encourage end-user interactivity, and new, efficient page layouts that improve overall productivity and reduce end-user training requirements.

“Delivering clear, compelling, and easily accessible travel and expense insights is our primary goal with TRAVELTRAX. This suite enables our clients to focus on the actions required to drive costs out of their travel program,” said Shane Hammond, President and CEO, TRX. “Our latest release demonstrates our ongoing commitment to the end user experience in parallel with our focus on unparalleled data integration and consolidation services.”

“TRAVELTRAX’s new user interface is a welcomed enhancement. With the updated site design, our current users are more productive than ever. New users require even less training to access our dashboards and reports, which accelerate the adoption of our agency’s travel programs. This maximizes the productivity of our Account Managers, creates differentiation between us and our competitors, and raises the overall success of our hosted travel initiatives. TRX has again set the bar in travel data reporting,” said Pat Fragale, president of Directravel.

TRAVELTRAX version 5.5 is currently in full release and is accessible to all current clients using the hosted TRAVELTRAX application.

About TRX
